### EDUCATION

#### University Of Central Punjab

Software Engineering

2019 - 2024

### PROFILE

I have recently completed my bachelor's degree in Software Engineering, where I honed my capacity for problem-solving and generating innovative ideas using effective methods. My keen attention is to detail and ability to work well in teams allow me to handle stressful situations with ease. I am now seeking a challenging career opportunity in a progressive organization that fosters growth and development, where I can utilize my skills to contribute to the organization's success while enjoying the flexibility of work hours. .

### PROJECTS

#### Final Year Project

- Catering companies registration.
- The companies within a 10km radius will be presented to users.
- Applied JWT for authentication and data integrity.
- The user's will be able to order and see the total bill.
- Order history will be displayed to user's as well as companies.
- Managed context API for state.
- Added a parallax effect to enhance the user interface.
- Designed complete UI/UX with responsiveness and animations.

#### BMI Calculator

- Created a BMI Calculator in JavaScript for quick and accurate Body Mass Index calculations based on user provided height and weight inputs.

#### Quote Generator

- Developed a Random Quote Generator using React.js, fetching quotes from an external API for dynamic content.
